

Inseqr Training

Who for?

We provide training for companies, hospitals, critical infrastructure entities, banks, law firms, public institutions, local government units, as well as schools and other organisations for which security issues are a priority.

What distinguishes the Inseqr solution?

When it comes to cyber security and OSINT, we speak in simple and understandable language. Content is tailored to the needs of the audience. Our instructors are experts, active academic lecturers and practitioners – specialising in cyber security issues. Looking for e-learning training? Our company will be pleased to prepare it for your employees.

WE CREATE A CULTURE OF SECURITY

Human beings are the weakest element in a cyber security system! Therefore, an important, if not essential element of a cyber security system in any company or institution is an employee with the knowledge of how to respond to incidents. At Inseqr, we have created a series of training courses for employees of companies and institutions regarding cyber hygiene, entitled: “Safe Employee”. Furthermore, Inseqr is a company specialising in the provision of OSINT-class tools, and therefore we offer training courses in White Intelligence, i.e. techniques for obtaining information about individuals, companies, competitors, products, etc.

1

“SAFE EMPLOYEE” TRAINING

Every employee in a company relies on the support of the digital infrastructure on a daily basis, so at Inseqr we provide comprehensive on-site, on-line and hybrid cyber hygiene training for company employees, at different levels of technological sophistication – from basic cyber security knowledge to specialised training for IT staff handling and responding to cyber security incidents.

2

OSINT TRAINING

Since we specialise in providing OSINT-class tools, our offer to companies includes training in “White Intelligence”. – i.e. acquiring information about individuals and entities from open sources available on the web. Interested in what your competitors are doing, whether someone is blackmailing you, or verifying whether any information about your new patent or idea is leaking out, or perhaps checking reviews of your new product, or investigating the connections and credibility of your contractor? During the training, we will demonstrate how to do this with examples of specific analytical tools, including our own – Quaero.

With our training courses, participants will learn, among other things:

- what mistakes are most commonly made online,
- how hackers work and what hacking techniques are involved,
- how to respond to online threats,
- how to protect an organisation's strategic assets,
- what is meant by the term – "cyber hygiene at work",
- whether a secure password is a myth,
- what are the types of social engineering attacks and possible ways to protect and counter them,
- how to apply best practices for prevention against cyber risks,
- how to respond to online hazards,
- what are the risks of providing too much information about yourself online – "profiling",
- how cyber attacks on similar organisations have been conducted,
- what is a "White Intelligence" and why it is important for organisations,
- how OSINT tools work.

Inseqr

We focus on providing innovative solutions in the broad field of ICT security.

Our team is composed of developers and managers, academics and practitioners, creating innovative solutions for public institutions and for business, with **security clearances** that enable the implementation of classified projects.

With an Industrial Safety Certificate, we provide services and projects covered by the secrecy clause.

Our expertise is focused on providing services and products that ensure the security of public institutions and business.

At Inseqr – we create a culture of security, our values are – **competence and trust.**
